`staged 166ms · synced 181ms · 3 file(s) back`

6 image file(s) stayed on the cluster — motioncorr jobs sync metadata only under the key-files policy (STAR, logs and plots come home; image stacks never do, whatever their size). They are listed in this job's Results — open or download one to fetch it on demand — or switch the connection's sync policy to "everything" to bring them home

6 files still on the cluster — Results → Bring home all brings them all in one click.
