7/16 jobs completed · 44%

PIPELINE STAGES 16

4 FAILED

Import Movies 1
6 movies imported from Cluster · headers (3 sampled): single-section MRCs 64×64 (mode 1) — motion-corrected micrographs, CTF-ready · Node type says Movies but the sampled headers say single-section (already motion-corrected) — CTF can consume these directly; MotionCorr would refuse them — paths stay on the cluster (zero upload) · pixel 1.77 Å

Motion Correction 1
REMOTE[cryo@127.0.0.1 · relion/5.0.1]: motion corrected, 6 micrographs · 6 still on cluster

CTF Estimation 1
REMOTE[cryo@127.0.0.1 · relion/5.0.1]: CTF estimated for 6 micrographs

Remote Ledger Door (t963)
REMOTE[cryo@localhost · relion/5.0.1]: motion corrected, 650 micrographs · 650 still on cluster

Peek Stress Bench (t966)
RELION motioncorr finished (the t966 peek-stress bench): 2100 micrographs motion corrected — the workdir carries a wide STAR table and a long pipeline log so the Files tab's peek doors have real stress to ride at the fold

Failed Diagnosis Face (t970)
failed

Idle Shape Face (t987)
idle

Continue Face (t988)
idle

Rounds Face (t989)
idle

Custom Error Face (t995)
failed

Negative Diagnosis Face (t972)
failed

Cancelled Diagnosis Face (t976)
failed

2D Classification 1 (t978)
2D classification completed: 1200 particles into 4 classes over 2 iterations (the t978 select-rider world's class2d face)

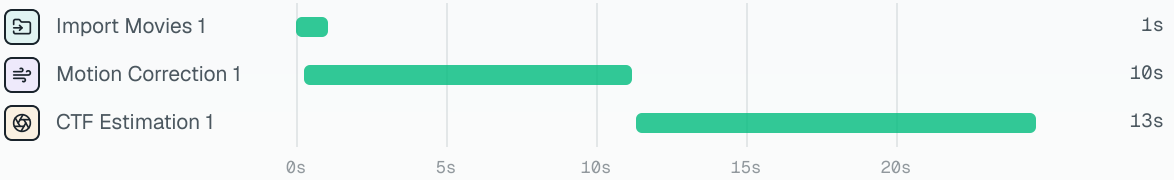

3D Classification 1 (t978)
3D classification completed: 1200 particles into 3 classes over 2 iterations (the t978 select-rider world's class3d face)

Classes Consumer (t978)
idle

Particles Consumer (t978)
idle

PIPELINE ANALYTICS live from your finished jobs

Session timeline · 3 runs across 23s

13 of 16 jobs in scope never started — bars cover engine runs only (startedAt → measured wall time)

Runtime by stage · 3 completed runs · 24s summed

heaviest: CTF Estimation · 52.6%

CTF Estimation	52.6%	×1	~13s	13s
Motion Correction	43.2%	×1	~10s	10s
Import Movies / Micro…	4.2%	×1	~1s	1s

share of summed wall clock · ~median · total — bars cover completed runs (a live run has no end yet)

Critical path · 3 steps · 23s span

ends with: CTF Estimation 1

1 Import Movies 1 — 1s
↳ overlapped 1s with upstream
2 Motion Correction 1 — 10s
↳ waited 0s after upstream finished
3 CTF Estimation 1 — 13s

the chain the pipeline's finish actually waited on · ran 24s − overlapped 1s = 23s span — a live run has no end yet, so it waits outside the chain

JOBS · 16 · NEWEST FIRST

Particles Consumer (t978) Idle Main
not started

Classes Consumer (t978) Idle Main
not started

3D Classification 1 (t978) Completed Main
3D classification completed: 1200 particles into 3 classes over 2 iterations (the t978 select-rider world's class3d face)

2D Classification 1 (t978) Completed Main
2D classification completed: 1200 particles into 4 classes over 2 iterations (the t978 select-rider world's class2d face)

JOBS · 16 · NEWEST FIRST

Cancelled Diagnosis Face (t976) Failed Main
the run ended in an external cancellation SLURM recorded in its own words (*** CANCELLED AT … *** — an operator scancel or a preemption; no reason named) mid-iteration 4 of 25 — the strip speaks the t994 scheduler-cancelled row (the face flipped from the teaser's zero to the one-match contract)

Negative Diagnosis Face (t972) Failed Main
relion_refine_mpi was cancelled by the partition's 24-hour walltime (SLURM: DUE TO TIME LIMIT) mid-iteration 7 of 25 — the log carries no error signature by design (the t972 negative diagnosis face)

Custom Error Face (t995) Failed Main
the wrapper died before RELION started — the modulefile named a RELION build the node no longer has (bash answered 'command not found', the step exited 127); the signature table answered ZERO — the teaser's negative leg re-homed (no known signature, the cause is custom to this job, the log is the truth)

Rounds Face (t989) Idle Main
not started

Continue Face (t988) Idle Main
not started

Idle Shape Face (t987) Idle Main
not started

Failed Diagnosis Face (t970) Failed Main
motioncor2 exited 137 — CUDA error: out of memory on GPU 0; the CPU retry was killed by the kernel's OOM killer (the t970 failed diagnosis face)

Peek Stress Bench (t966) Completed Main
RELION motioncorr finished (the t966 peek-stress bench): 2100 micrographs motion corrected — the workdir carries a wide STAR table and a long pipeline log so the Files tab's peek doors have real stress to ride at the fold

Remote Ledger Door (t963) Completed Main
REMOTE[cryo@localhost · relion/5.0.1]: motion corrected, 650 micrographs · 650 still on cluster

CTF Estimation 1 Completed Main
REMOTE[cryo@127.0.0.1 · relion/5.0.1]: CTF estimated for 6 micrographs

Motion Correction 1 Completed Main
REMOTE[cryo@127.0.0.1 · relion/5.0.1]: motion corrected, 6 micrographs · 6 still on cluster

Import Movies 1 Completed Main
6 movies imported from Cluster · headers (3 sampled): single-section MRCs 64×64 (mode 1) — motion-corrected micrographs, CTF-ready · Node type says Movies but the sampled headers say single-section (already motion-corrected) — CTF can consume these directly; MotionCorr would refuse them — paths stay on the cluster (zero upload) · pixel 1.77 Å
